

machine room

49 racks, 3 rows
(X, Y) documented

rack

20 nodes
slot = height

node (AC922 8335-GTG)

2 sockets + 4 GPUs
id = 20 rack + slot

the die in one socket

12 slices · 4 harvested (x) · 16 of 24 cores active

one slice = the unit that is fused

what a change in the recovered map means, and how often (steady state)

RELABEL

19%
p0/p1 tags swap;
no silicon moves

CPU-SWAP

70%
one socket changes;
processor replaced

NODE-SWAP

11%
both change, no mirror;
whole node replaced

GUARD

3 events
one slice deconfigured;
firmware, reversible
